Summary

Technical program leader experienced in translating complex government and regulated customer needs into secure, large-scale cloud and product solutions. Currently leading cross-organizational readiness programs for Amazon LEO Government satellite communications deployments, with prior leadership in AI and quantum strategy at Microsoft and mission-critical satellite systems for the DoD and Intelligence Community.

Experience

Amazon

Arlington, VA

SATCOM Field Operations Manager, Amazon Leo for Government

November 2025 - Present

- Lead cross-org reverse logistics program for Amazon Leo for Government, coordinating Business Operations, Product, Logistics, and Engineering to define return workflows that enable field operations readiness for customer terminals and accessories.

Senior Technical Program Manager, Foundational Security Services

May 2025 – November 2025

- Supported efforts to secure privileged engineer access across AWS commercial, government, and disconnected cloud regions, improving permissions governance and reducing exposure to customer data through Contingent Authorization initiatives.
- Built a financial reporting and forecasting system tracking 14 fleets managed by engineering leaders and monitoring usage across 200+ AWS infrastructure services, providing visibility into a \$6M annual budget and enabling Directors and Principal Engineering Managers to make informed, data-driven decisions.
- Developed an internal Claude-based AI tool that automated project planning and goal alignment workflows, improving execution efficiency and organizational visibility across engineering teams.

Microsoft

Reston, VA

Director, Strategic Ventures

October 2023 – May 2025

- Led capture strategies for autonomous AI and quantum computing initiatives across DoD, IC, and U.S. National Labs; submitted 10 RFIs and 4 unsolicited proposals, secured 3 contracts, and generated \$20M in revenue through proactive market positioning.
- Conducted detailed market analysis of U.S. National Labs, identifying 7 key labs and 13 critical offices, uncovering a \$2.3B addressable market for autonomous AI technologies in biopharma and advanced material science.
- Developed and implemented a strategic market evaluation framework for quantum computing, analyzing global regions to prioritize three high-potential markets, guiding sales and product roadmap alignment.
- Authored a comprehensive due diligence playbook to enhance sales team efficiency, reduce evaluation timelines by 50%, and streamline client engagement in complex technology solutions.
- Designed and executed a growth strategy for Microsoft Federal, identifying 24 untapped Major Defense Acquisition Programs suitable for autonomous and AI integration, contributing to expanded defense pipeline growth.

Senior Product Manager, Office 365

May 2021 – October 2023

- Directed product development and engineering teams to deliver Microsoft Teams and Office Online for federal cloud environments, prioritizing 1200 services and improving deployment parity by 90%.
- Oversaw the development of a 10-week cybersecurity assessment plan to test Office 365 services with customer security penetration team; resulted in successful authorization to operate (ATO) for two sovereign cloud environments.
- Secured and managed \$24M contract for continuous incident management support across two U.S. Government cloud environments, enhancing operational resilience and compliance.
- Led senior executive quarterly reviews, presenting composite SLA performance evaluation across 9 Office 365 products to engineering leaders, and aligning product strategy to improve government cloud environment health.

Science Applications International Corporation (SAIC)

Chantilly, VA

System Engineer Principal, Overhead Persistent Infrared (OPIR) Architecture

October 2020 – May 2021

- Guided studies across U.S. Space Force, Missile Defense Agency, and Intelligence Community stakeholders to develop next-generation satellite ground processing systems and integrating cloud-based management services for scalable operations.
- Provided technical leadership in the cost and design assessment of legacy data-dissemination systems, developing strategies that aligned with the DoD's data growth-rate objectives and enhancing operational capabilities by 10x.

US Air Force, National Reconnaissance Office (NRO) - Rank: Captain **Chantilly, VA**
Program Manager (COTR), Real-Time Satellite Data Dissemination Service (RTS) November 2017 – October 2020

- Integrated all OPIR satellite data—including 15 non-traditional feeds from across the Intelligence Community (IC) and DoD—into the RTS system, expanding enterprise access and data science output by 38% while meeting cross-domain security standards.
- Managed 55-member team in the development, operation, and sustainment of a \$50M+ real-time satellite data dissemination portfolio, delivering intelligence to 80+ DoD/IC programs.
- Led the 0-to-1 development and delivery of a \$10M satellite data dissemination and management solution for U.S. missile defense, integrating real-time cross-domain (up to TS/SCI level) and doubling global data access for customers.
- Successfully secured and executed a \$26M follow-on software contract, expanding the initial platform into the U.S. missile defense mission's first cloud-enabled, secure data dissemination solution, enhancing operational resilience and scalability.

US Air Force, Global Positioning Systems Directorate (GPS) – Rank: Captain **Los Angeles, CA**
Deputy Chief of Staff April 2017 – November 2017

- Advised the GPS Program Management Office (PMO) Director on strategic planning, portfolio gap analysis, and procurement initiatives, driving alignment between \$32B satellite navigation portfolio and defense objectives.
- Developed and executed a \$100M portfolio gap-filler strategy, successfully addressing GPS encryption program shortfall by optimizing resources across Air Force Space Command operations.
- Implemented streamlined cross-functional procedures between engineering, finance, and contracting teams, enhancing efficiency and reducing approval timelines by 20%, ensuring compliance with DoD standards.

Space Program Executive Officer (PEO) Staff Director April 2016 – April 2017

- Oversaw the GPS Program Management Office (PMO) acquisition, contracting, and financial workstreams across ACAT I, II, and III programs conducting milestone schedule analysis, technical requirements monitoring, and Congressional communications.
- Identified cross-functional dependencies between Air Force Space Command's budget office, requirement division, and congressional legislative team leading to full-funding approval of the \$1.9B next-generation GPS satellite program.
- Developed strategic program continuation roadmap with GPS executive leadership ensuring \$5.6B Next-Generation GPS mission management system (OCX) was approved by the Department of Defense and Congressional oversight committees.

Program Manager, Nuclear Detonation Detection Ground System June 2014 – April 2016

- Led the development and sustainment of a \$20M/year nuclear detonation detection system across nine global facilities, ensuring compliance with multi-agency security protocols and mission objectives for nuclear nonproliferation.
- Integrated Risk Management Framework into the next-generation system design, achieving 20% cost savings while enhancing operational security and efficiency.
- Orchestrated a \$3M modernization initiative, completing multi-site system upgrades 30 days ahead of schedule through cross-functional coordination and process optimization.

US Air Force, Global Strike Command, Malmstrom Air Force Base – Rank: Captain **Great Falls, MT**
Intercontinental Ballistic Missile (ICBM) Combat Crew Commander April 2010 – June 2014

- Led, mentored, and trained a 16-member nuclear operations team, ensuring 100% operational readiness for 50 Minuteman III ICBM systems, directly supporting national strategic deterrence objectives.

Education

New York University, Leonard N. Stern School of Business **New York, NY**
Executive MBA, Concentration in Strategy and Corporate Finance (Top 10% Graduate) July 2021

University of Washington **Seattle, WA**
Bachelor of Arts, Economics June 2009

Core Competencies

Cloud Security & Compliance (AWS, Azure) | AI Strategy | Intelligence, Surveillance & Reconnaissance (ISR) | OPIR & Satellite Data Integration | Cross-Domain Solutions | DoD & Intelligence Community Program Delivery | Interagency & ODNI Engagement | ACAT I–III Program Leadership | Defense Budgeting & PPBE Execution | Systems Engineering | Enterprise Program Delivery | Stakeholder & Executive Alignment | Proposal Capture & Growth Strategy | Cross-Functional Leadership | Japanese (Conversational)
